Hey! 👋 I build full-stack apps. I'm always learning, enjoy solving tricky problems and have a thing for great user-centric design and experiences.

I've also recently started writing which I'm thoroughly enjoying, documenting anything from random electronics projects to how I've released an iOS app with some help from AI coding tools. You can find my articles here.

Experience

Our Future Health

Full Stack Engineer

March 2026 - Now

Working as part of a small but very cross functional team (from design to science) building out a new health questionnaires platform for the organisation.

I have also worked across the full stack of a new system and customer journey through to its successful release, gaining new experiences with database management and Kubernetes. As part of this I introduced improvements to web accessibility along with automated checks to keep standards within the team, and end-to-end smoke tests run as part of delivery pipelines (Github Actions), giving the team more confidence in releases across distributed repos.

Veygo by Admiral

Senior Full Stack Engineer

July 2025 - March 2026

I led the rebuild of our quote-to-buy web app and journey, which solved key business problems and revolutionised how we serve our customers. As part of this, I introduced new technologies and architectures, such as a new design system and GraphQL to increase flexibility and dramatically speed up experimentation through A/B testing. I defined milestones and the slices of work ensuring we delivered value quickly to the business and our customers, working closely with the leadership team to define and manage expectations and timelines. All of which has led to significant improvements to conversion (to purchase), observability and performance.

Worked as co-lead of the web development engineering chapter, setting standards from accessibility to code quality along with managing a shared backlog of bugs and security updates. I also ran sessions introducing concepts to the wider engineering team, like GraphQL.

Tech stack

Languages

Typescript & Python

Frontend

React (Next, React Router & React Native), CSS, Tailwind, Redux, RTL & Cypress

Backend

Node.js, Django, Fast API, GraphQL & Temporal

Infra

AWS, Terraform, Serverless Framework & CI/CD

Education

Loughborough Uni

Sep 2016- Jul 2019

Computer Science - 2.1

Certs

AWS Cloud Practitioner

Mentoring and coaching were an important part of my role, both ad hoc within teams and more formally during onboarding and regular catch-ups. I also worked on engineering-wide initiatives, helping set principles and establishing conventions for all aspects of engineering, from testing to pull requests.

Full Stack Engineer

July 2019 - June 2025

I started my professional journey here, joining an amazing team of engineers. Gaining experience with React, React Native, Django and AWS as part of an Agile scrum team. I worked on multiple cross-functional teams, from delivering new insurance products, web and mobile app experiences, to building scalable backend services and APIs in a move to a serverless (microservice) architecture.

Took the lead on several projects, including redesigns of key customer web journeys, which have led to improved conversion and UX. And delivering a brand-new telematics product that supports customers on a new subscription-based offering.
